In the claims

A statement of the status of claims follows:

Claims 1-41 (canceled).

42. (currently amended) A display device comprising:

(a) a lenticular lens assembly having an associated graphic component whereby different images are presented to a viewer when observed at different viewing angles;

~~and~~

(b) means for securing said assembly to a sliding door, being mounted in a frame[.]; and

c) wherein the different images comprise a sequential set of images that become visible to a person sequentially as the sliding door moves.

43. (previously presented) The display device of claim 42 wherein said frame includes a compartment containing audio circuitry.

44. (previously presented) The display device of claim 43 wherein said audio circuitry includes a microprocessor, a power source, a speaker and a proximity switch for activating said circuitry to produce an audio message.

45. (previously presented) The display device of claim 44 wherein said microprocessor is programmable.

46. (previously presented) The display device of claim 44 wherein said audio message is synchronized with said images.

47. (previously presented) The display device of claim 42 wherein said door is an automatic door.

48. (previously presented) The display device of claim 43 wherein said audio circuitry includes a sound recording, a power source, a speaker and means for activating said circuitry to produce an audio message synchronized with said door movement.

49. (previously presented) The display device of claim 48 wherein said means for activating said circuitry comprises switch means in operative communication with said door as it moves.

50. (previously presented) The display device of claim 47 further comprising a proximity sensor such that said door operates when a person activates said proximity sensor.

51. (canceled).
